

Art Unit: 2194

an exception handler selector for determining if there is an application based C++ exception handler that is capable of resolving the exception translated by the exception translator;

a thread terminator for terminating the thread when there is no C++ based exception handler that is capable of handling the translated exception;

a crash recovery manager for calling an application defined callback that supplies application-specific handling which re-executes the instruction and continues at a next line of code of the application; and

an executor for continuing execution of the application.
